

Building Permit Activity in Built-Out Towns, 1990s vs. 2000s December 2010

A municipality's build-out percentage indicates what percent of the municipality's total developable land has actually been developed. Developable land, in turn, refers to land that can actually be built on; it excludes lands that have been permanently preserved as open space, as well as lands (like wetlands or steep slopes) on which building is prohibited by environmental regulations. "Percent built-out" is computed as developed (or "urbanized") land divided by the sum of developed land and land that is undeveloped but still developable. Permanently preserved or environmentally constrained lands are excluded from both the numerator and the denominator of the calculation.

On rare occasions, as with Walpack Township in Sussex County, this can lead to counterintuitive results. Walpack is located entirely within the Delaware Water Gap National Recreation Area, where future development is prohibited. So although Walpack is mostly undeveloped, it will remain that way because its open spaces have effectively been permanently preserved; it has no developable land remaining and is thus technically "built-out," albeit at a very low density and with a very high proportion of open space.

But Walpack is the exception; by and large, places that are mostly built-out are also places that look mostly built-out. Their remaining open spaces tend to be parks, small parcels or relatively inaccessible lands that cannot be built upon.

The table below contains data on the issuance of building permits in municipalities that were at least 90 percent built-out as of 2002 (the closest year to the beginning of the decade of the 2000s for which land development data are available). The build-out percentages are based on unpublished estimates, produced by researchers at Rowan and Rutgers universities, of the land areas in each municipality that fall into one of three categories: 1) already developed/urbanized, 2) permanently preserved or environmentally constrained ("undevelopable") and 3) undeveloped but still developable ("available").
